News Brief

www.data-collection.com

DO YOU... DI/DO? WOULD YOU LIKE TO???

The **7526** offers **Digital Input/Digital Output** capabilities for opening doors, lighting lights, ringing bells or a variety of other functions you may require. There are 8 DI/DO points that can be configured as DI, DO or 4 each. See page 2-9 of your [7526 Installation, Operation and Problem Determination](#) manual for more details.

Security - Can you have too much???

With the **increased focus on security** you may already have a potential solution installed at your location that has the capability to give you **controlled access to those sensitive areas**. And, while we're on the subject of security, how about replacing those worn barcode badges with new, more secure, badges that get read by **highly secure proximity sensors**? Call us for more information.

BATTERIES BATTERIES BATTERIES

Have you checked yours lately? If your DCTs have been installed for 3 years or more, you should consider replacing the Memory Retention (CMOS) battery in your 7526s and 7527s and the Operational Backup Batteries in your 7526s.

Remember **"An ounce of prevention is worth a pound of cure."**

**Thanks for giving us your time -- we hope you find these
"News Briefs" informative.**
