## News Brief

[www.data-collection.com](http://www.data-collection.com)

### *Ready for the next Blackout ?*

**As many of you have recently learned (again?) BLACKOUTS can and will occur** – Be prepared with the 7526 internal Operational Battery Backup feature. This battery will sustain power to the 7526 Data Collection Terminal and its optional (barcode, magnetic or proximity) readers. It has plenty of power to stay running long enough for everyone to record their work or clock-out, even in the dark with the standard backlit display ! (When power is restored and connections resumed the information will be sent to the server as usual.)

Now is a good time to add new or replace older Operational Backup Batteries.

WOW.....Receive \$10.00 off our already low Operational Battery Backup price. (Mention this newsletter when ordering. ) Offer good until 10/30/03.

### *Manuals Lost ?*

**Can't find those 7525, 7526 or 7527 manuals?** – The manuals for this hardware can be sent to you if needed. They are packed full of valuable information that can help you with setup, configuration, network cabling and trouble-shooting. If you cannot find your copy or want extras give us a call.

Remember: We offer *Repair Service* and *Maintenance Agreements* for all three families of IBM DCTs - the ELF(7494/7525), 7526 and 7527.

*Thanks for your business!*

Ron, Jack, Tottie & Mike
